

BRAND & POSITIONING.

The single source of truth for who we are, what we build, and how we show up — the blueprint our website is built from.

01 POSITIONING

Everything in this document — and everything on our website — hangs off one idea. If a sentence, a service, or a design choice doesn't trace back to this, it doesn't belong.

THE CORE

We build custom software and web platforms from scratch — and wire in the automation that removes the manual work inside them.

In one line: a technology studio building custom software, web platforms, and the automation layer that connects them.

Mission.

To build software that gives growing businesses real control over how they operate — replacing workarounds, spreadsheets, and manual effort with systems made to fit.

Vision.

To become the technical team that ambitious businesses trust for the long haul — the partner they grow with, from the first build through everything that comes after.

Promise.

Everything we build is bespoke, owned by you, and made to evolve. **No templates. Ever.**

02 WHO WE ARE

Two19 Labs is a small, senior technology studio. We are early by design — lean enough that the people who scope your project are the same people who build it, and close enough to the work that nothing gets lost in translation.

We don't compete on headcount or a long client list, and we don't pretend to. We compete on craft, speed, and access: founders on every call, working software in front of you early, and a direct line to the team actually building it. For the businesses we serve, that closeness *is* the product.

Our edge isn't scale — it's care. Small enough to obsess over your build, senior enough to get it right the first time.

03 WHAT WE DO

Our work has one centre of gravity — building software and the web platforms around it — with everything else extending from that core.

The core — Custom software & web.

We design, build, and maintain custom software and web platforms shaped around how a business actually runs — never forced into an off-the-shelf template.

- Internal tools, dashboards, and workflow systems
- CRMs, customer portals, and self-service platforms
- Booking systems, e-commerce, and marketplaces
- Marketing sites, web apps, and SaaS products

Automation, woven in.

Automation isn't a separate product we bolt on — it's the intelligence layer we build *into* the software we deliver: automated workflows, AI-assisted communication, document and data processing, and the removal of repetitive manual work, built directly into the systems we ship. As this practice matures and earns its own case studies, it grows into a standalone offering.

Supporting capabilities.

Beyond the core build, we extend the relationship with:

- **Technical leadership** — CTO-as-a-service: strategy, architecture, and stack decisions for teams without an in-house technical lead.
- **System integrations** — APIs, payment gateways, and connecting the tools a business already runs on.
- **Ongoing support** — monitoring, security, and iterative improvement after launch.

POSITIONING RULE

Lead with software & web everywhere. Automation is presented as a capability built into the work — not a co-equal headline — until it is backed by shipped, nameable projects.

04 WHO WE WORK WITH

We work best with founders and growing businesses that have hit the ceiling of manual processes and off-the-shelf tools — teams that need software built around them, not the other way around.

We've delivered across sectors, and stay deliberately adaptable while we sharpen our focus:

- Hospitality & retail
- D2C & e-commerce
- Creative, music & entertainment
- Operations-heavy teams needing internal tooling

As real traction concentrates in one or two of these, this list should narrow — being the obvious choice for a niche beats being an option for everyone.

05 SELECTED WORK

We describe every engagement as exactly what it was — no logo on this page implies more than the work behind it. **Specificity is more convincing than borrowed scale.**

Ghoomar WEB PLATFORM · DELIVERED

A modern, fast, conversion-minded website built from scratch for the Ghoomar restaurant brand — their full web presence, designed and developed end to end. [Add: scope detail, outcome, live link.]

Ashirvad (at ITC) KIOSK UI PROTOTYPE

An in-store kiosk interface prototype designed for Ashirvad, a brand under ITC — translating an in-store retail experience into a clean, usable touchscreen UI. A focused UI/prototype engagement. [Add: screens, scope.]

University of Delhi INTERNAL PROJECTS

A series of smaller internal software projects delivered for teams within the University of Delhi. [Add: brief examples.]

Bracketed notes mark where real detail, screenshots, or links should be added before this goes public.

06 HOW WE WORK

A structured process from first call to long-term partnership. Every step is deliberate and documented.

- 01 Discovery & Requirements**
We start by understanding the business, goals, pain points, and existing systems.
- 02 Strategy & Architecture**
A tailored technology strategy and system architecture aligned to objectives and budget.
- 03 Proposal & Alignment**
A clear proposal covering scope, timelines, deliverables, and investment — full alignment before any build.
- 04 Design & Development**
Building and iterating in focused sprints, with regular demos and direct access to the team.
- 05 Quality Assurance**
Rigorous functional, performance, security, and user-acceptance testing before launch.
- 06 Deployment & Handover**
Full deployment, go-live, documentation, and onboarding — you own everything.
- 07 Ongoing Partnership**
Post-launch monitoring, improvement, and scaling as the business grows.

07 VOICE & MESSAGING

How we sound.

Direct, confident, precise. We sound like senior engineers who respect the reader's time — plain language, no buzzword soup. Quietly ambitious, never boastful. We let the work and the specifics carry the weight.

Signature lines.

Build smarter. Scale faster. — primary rally line.

No templates. Ever. — our differentiator, used as a stamp.

ready to be unstoppable? — accent line, serif italic, used sparingly for emotional beats.

WE SAY

Built from scratch
Bespoke / made to fit
Systems & workflows
You own everything
Direct access

WE AVOID

Synergy / revolutionary
World-class / cutting-edge
Vague AI hype
Claiming scale we lack
Overstated logos

08 VISUAL IDENTITY

The system below is fixed. It defines how Two19 looks everywhere — website, decks, social, documents.

Logo.

Primary wordmark

Monogram — T19.

- The **blue dot** is the signature — always present, always Lab Blue. It is the one element that must never be dropped or recoloured.
- Place the logo on Ink (black) or Bone only. Never on busy imagery or competing colour.
- Never stretch, rotate, recolour the lettering, or add effects. Keep clear space around it equal to the height of the “T”.

Colour.

Lab Blue	Bone	Ink	White
HEX #0F3FFE RGB 15 · 63 · 254 PRIMARY / ≈30%	HEX #F2EFEA RGB 242 · 239 · 234 CANVAS / ≈60%	HEX #0E0E0E RGB 14 · 14 · 14 TYPE / ≈10%	HEX #FFFFFF RGB 255 · 255 · 255 TYPE ON BLUE

Bone is the default canvas. Lab Blue is the accent that carries the brand — used with intent, not poured over everything. Ink for type. White only for type on blue.

APPROVED PAIRINGS

BLUE / BONE	WHITE / BLUE	INK / BONE	BONE / INK

Typography.

BUILD SMARTER.

Display — Archivo Black · all caps · tight leading. Headlines and big statements.

ready to be unstoppable?

Accent — Instrument Serif italic · lowercase · used sparingly for emphasis.

Two19 Labs builds custom software, web platforms, and the automation woven into them.

Body — Archivo Regular / Medium · sentence case. Everything else.

LAYOUT PRINCIPLES

Generous whitespace · hard rules and dividers · numbered sections · editorial grid · blue as a precise accent, never wallpaper. The brand should feel engineered, not decorated.

NO TEMPLATES. EVER.

Build smarter. Scale faster.
